Introduction

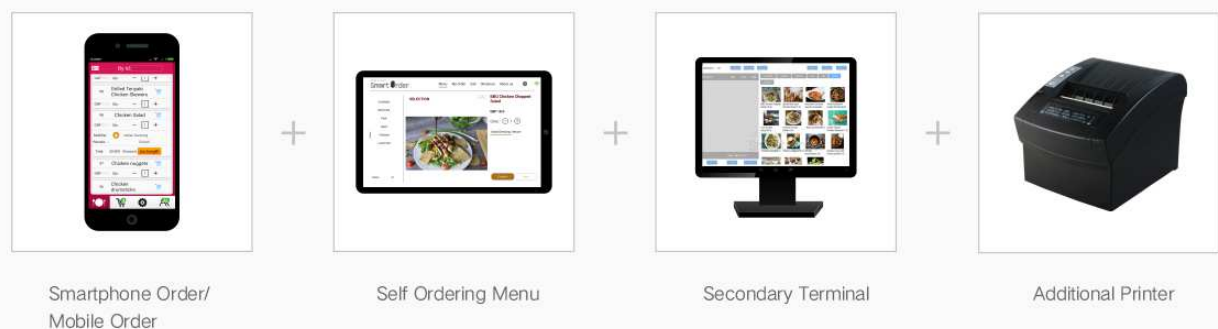

In this document, we will guide you to prepare your hardware for SmartOrder System.

What hardware do I need?

To setup our POS system you will at least to have a 15 Inch All-in-One Computer, the main terminal can be ours 15 Inch all-in-one Android Computer (Online Shop) or a Android tablet with (1280 x 800). The main terminal will be using as the network server, therefore users do not have to purchase additional servers. Secondly, user can decide how many printers or cash drawer they needed. Generally a restaurant will need a minimum of two network thermal printer and a cash drawer, one printer for printing the receipt and the other to print the order. We recommend to purchase the network cable from our online shop. Because low quality network cable will directly affect the stability of the system. If the network router doesn't have enough network port, you can buy a network switch from our online shop as well.

Optional

Prepare Hardware

Picture above show some hardware items for your reference

The following is the hardware list that required:

- 15" Quad Core All-In-One Capacitive Touch Screen (Recommended), can be bought from our online shop
- Android Tablet with (1280x800) resolution, with tablet holder
- Network Router (We have a recommended model, a bad router will cause system unstable)
- Network Switch (Only if you got multiple devices that require more port than your router)
